# LoanerTrak® 3.0
Medical Logistics Software

Multi-company Access

LoanerTrak is a client-server application that can be set up to work with multiple distribution centers connected to the same database through a LAN or WAN. This allows users to view and access data in other distribution centers according to the user's security permissions. Access can include the ability to book, ship and receive orders in other locations.

WebPortal

Our new addition to the product line, **LoanerTrak WebPortal,** interfaces directly to LoanerTrak, providing your customers, representatives, and sales force with information from anywhere in the world.

WebPortal is a highly advanced, secure, web-based application building system that provides tools to quickly customize screens, menus and submenus into a complete customized web application.

Sync Data To/From Other Systems

LoanerTrak's **DataSync** module is designed to run on your company's LoanerTrak server and automatically synchronize data between your Mainframe ERP database and LoanerTrak. DataSync can automatically sync data from any leading database system, utilizing text based output files.

Automatic Email Notification System

LoanerTrak's **Auto Emailer** system is designed to run on your company's network and send email notifications to user-specified email recipients (managers, internal staff, customers, field reps, sales reps) at specific points during the loaner cycle.

Email notification settings can be easily set up by field rep, customer, or ship to location, and will automatically send recipients emails at specified checkpoints.

Shipping documents can be automatically generated and attached to shipping email notifications.

APIs for External Customization

Do you need to share loaner data with other databases or applications in your company? LoanerTrak now includes 30 APIs (Application Program Interfaces) located throughout the program which provide a mechanism to automatically run external custom code each time a user executes a function within LoanerTrak.
Lot Expiry Control

Control how your users are notified, or prevent them from shipping a loaner, if a lot in the order is expired or about to expire. LoanerTrak can be configured to notify and/or stop users from proceeding with functions like replenishment, releasing a built set or shipping a set that contains expiring lots.

Print Kit Photographs and External Documents

Digital image files can be linked to each kit by individual kit or by the kit type and automatically printed during the shipping function (and optionally emailed automatically). In addition, external pdf documents, such as cleaning instructions or user's manuals, can be linked to each kit and automatically printed during shipping.

Advanced Scheduling System

Schedule orders with ease. The most powerful component of LoanerTrak takes the most lengthy task of scheduling and reduces the time to just minutes.

Users input customer details, surgery date and kit(s) required and press a button. LoanerTrak utilizes its powerful internal virtual calendar to determine which kits are available during the dates required and books the available kits within a second. If the LoanerTrak WebPortal is utilized, order requests are fed directly into the schedulers' screens for approval and processing.

Centralized Scheduling

Keep sets at multiple distribution centers and schedule all from one screen. Tools are available to auto select complete sets only, sets in house, sets with no expiring lots, etc.
Real-time Visibility Kits and Items

Every transaction is processed within a sub-second and is visible to all users in LoanerTrak and the Web Portal in real time. No batch processing.

Detailed Transaction Logging

All activity in LoanerTrak is logged in real time down to the item level. System Administrators may view and report all user activity as well as order, kit and item transactions.

Coming Soon

Internal Direct Messaging

Enhance communication between users relating to loaner activity. Messages can be attached to booking orders, kits or items, or any transaction in LoanerTrak, providing additional instructions or valuable information.
